OCAT[®] Oleoresin Capsicum Aerosol (Pepper Spray)

Aerosol chemical agents have been around for many years. The impact of the use of these chemical agents wasn't significant until 1976 when Mr. Gardner Whitcomb introduced an Oleoresin Capsicum (pepper spray) formulation. OC has proven to be more effective than CS or CN, and as a result, numerous companies now manufacture OC aerosol sprays.

Since the introduction of the OCAT[®] training program in 1991, more than 200,000 basic users have been trained from agencies such as healthcare, federal, military, law enforcement, security, and corrections. The OCAT[®] program is not brand specific and addresses the proper use of all OC products.

What is Oleoresin Capsicum?

Commonly called "Pepper Spray", Oleoresin Capsicum is a convenient aerosol spray that is used as a protection device. When used before hands-on defense, there is less risk of injuries to all parties.

Effects of OC?

OC affects the skin, face, eyes, and respiratory system and is usually immediately debilitating. This court-defensible deterrent is reliable and has no long-term harmful effects on the recipient. OC is completely safe.

Who benefits from OC training?

The OCAT[®] program is designed for human service professionals who deal with conflict or potential violence. This includes corporations, law enforcement organizations, security, academic, healthcare, military, and federal agencies. More than 200,000 Basic OCAT[®] users have been trained worldwide.

You will learn how to...

Identify the stages of conflict in order to: recognize the threat, reduce the threat, and determine how and when to use force.

Apply state-of-the-art tactical concepts such as: spraying techniques, disengagement, proper defensive positions, methods of movement, multiple opponent defense, contact and cover system, defense against moving attacks, ground defense, and drawing techniques.

Limit liability suits through:

- Certified training
- Understanding the effects of OC spray
- Identifying factors which justify OC use
- Proper OC incident documentation.

Our trainers are certified and authorized by Personal Protection Consultants, Inc. (PPCI), to provide training in the OCAT[®] and Path[™] courses owned by PPCI.

Path[™] Practical and Tactical Handcuffing

Proper Training in the Use of Handcuffs is Vital

Handcuffs are among the most often used tool by officers, yet training is severely lacking. Studies show that over 67% of resistance by subjects occurs after the first handcuff has been applied. All too often the result is injury and/or death to either the officer or subject.

PATH[™] Basic Certification Course

This four-hour basic course is the most complete and innovative handcuffing course in the country. The techniques presented are practical and effective. Topics to be covered include the safest approach and positioning for handcuffing, handcuffing resistive subjects, removing handcuffs, and the use of various type of cuffs, among others.

Course Topics

- Handcuffing Nomenclature
- Hinged Handcuffs
- General Handcuffing Guidelines
- Handcuffing the Resistive, Non-Resistive or Semi-Resistive Subject(s)
- The Prone Straight Arm Lock
- Disengage & Decentralization Skills
- Prone Handcuffing
- Standing a Prone Handcuffed Subject
- Removing Handcuffs
- Frisk & Cuff
- Use of Contact Cover
- Use of Plastic Cuffs

Benefits of Hands-On Training Course

- Reduced Injury to Officers and Subjects
- Reduced Exposure to Civil Liability
- Reduced Workers' Comp Payments
- Increased Performance, Efficiency & Speed when Applying Handcuffs
- Increased Confidence & Morale
- Increased Safety
